## MACHINE TOOLS INDUSTRY

The shortage of skilled labor in recent years has proven to be a real challenge for the machine tools industry. In order to provide the necessary solutions, three key trends - automation, digitization, and multifunctionality — require major changes that draw on a wide spectrum of advanced technologies such as robotics, AI, and IoT.

## Machine Tools and IDEC

## OPERATOR SAFETY FIRST

Interlocking devices are the most critical component in machine tool safety. IDEC products meet the requirements of international safety standards and have the sturdiness and durability to stand up to the machine tool use environment. In keeping with the emerging trend toward automation, even in machine tool peripheral devices, we can supply safety edge switches, safety laser scanners, and other products geared to the new needs automation presents, helping to boost machine tool safety.

## BUILT TO LAST

IDEC has spent more than 75 years developing and improving products with a constant focus on ease of use and quality. Our lengthy experience in the machine tools industry has made us acutely aware of the environmental resistance and durability needed to withstand a demanding environment as we continue to hone our product quality. IDEC is the trusted brand of many customers in the industry, and many of our products are used in machine tools worldwide.

## COMPOUND SYSTEM SOLUTIONS

High-level automation solutions, for not only machine tools but also peripheral equipment, are now being explored as an answer to worldwide labor shortages. IDEC is using the product and safety knowhow that we have developed in robotics, material handling, and other industries to help machine tool manufacturers pursue automation and increase safety.

## 遊 <br> KW2D

Smart user authority control and log management with RFID

I Can be used as an IS016090 MSO access device to assign user authority according to the skill level of the worker.

I Standard $\emptyset 22 \mathrm{~mm}$ panel cut-out enables easy installation.
I Device equipped with Verification function. Easy tag registration using a software program.

I Ethernet communication (Modbus TCP, EtherNet/IP, CC-Link IE Field Basic) allows easy communication with existing devices.

## Authority control for machine and devices

## BEFORE

Anyone can operate the machine

Prevents inadvertent operations and setting changes, and prevents dangerous situations for operators.

An RFID reader is mounted on an operation panel with $\emptyset 22 \mathrm{~mm}$ panel cut-out. The reader is then used to register workers and authenticate their ID cards.

## LF3D

## LED Lighting

# Robust, excellent environmental resistance, and uniform light distribution 

IIDEC's lineup of products offer light distribution characteristics (condensing lens, diffusing lens) for various applications. Wide-angle, bright illumination sheds light on a wide area from blade edges to pallets.

I Compact and lightweight, saves space inside machines.
IIP67G rated to withstand harsh environment inside machine tools.
I Designed to reduce multi shadows and reflections from light sources on workpieces.
IEquipped with a glare Save function to dim brightness by half, reducing glare to the operator during maintenance.
| M12 connector types available.

## New <br> 递 <br> Safety Commander ${ }^{\text {rm }}$

Tablet Mount Safety Device

## Safety functions (emergency stop switch / enabling switch) added to commercially available tablets for use as a remote controller or teaching pendant

IThe device can hold tablets 8 to 11 -inch for flexible mounting.
IErgonomic grip design ideal for long and fatigue-free operation.
I Pivoting mechanism allows the tablet to be used vertically or horizontally to display a variety of contents such as tables, graphs, and maps.

I Dedicated accessories including wall mount for installation in limited spaces when the device is not in use.

Emergency Stop Switches

Unique technology for extreme safety

I Reverse energy structure and Safe Break Action minimize the possibility of failure in the event of an accident.
IE-stops can be reset by turn reset or pull reset, preventing failure caused by incorrect reset operation.

I Smooth surface and low profile prevents interference with other components on the operation panel.

- Safe Break Action

When the contact block is detached from the operator, the NC contact opens (OFF).

Reverse Energy Structure
With $X$ series, the potential energy level of the latched status is lower than that of normal status. In the event the switch is damaged due to excessive shocks, the NC contacts will turn off, thus stopping the machine (patented design)

Forced Guided Relays

## 2-pole forced guided relays reduce cost and installation space

I2-pole relays achieve easy configuration of a safety circuit without having an excessive number of poles.
| Mechanical indicator allows easy confirmation of the contact status.
I By using the relays with Push-in terminal, screw terminal, or PC board sockets, the relay can be easily replaced during maintenance.

Operator Interfaces

Touch panel with
excellent oil resistance and robustness

IP66F rated operator interface for use in machine tool environments where oil is used.

- Hard coat protected for excellent durability and preventing scratches during operation even with metal cutting chips remaining on the hands.

Application: Operation interfaces

Touch panels suitable for machine tool environments

## 递 SX5E

Ethernet Switches

Unmanaged Ethernet switches equipped with various features

- High impulse resistance enables high reliability and stable operation.

I Robust metal housing for superior environmental resistance
I Compliant with Fast Ethernet standards for high-speed communication
I Equipped with various functions such as QoS (8-port model only) and redundant power input ( ${ }^{(1)}$
*1 Available soon

Application: Control panels for machine tools and equipment
